teaching in the fast lane offers teachers a way to increase student engagement an active classroom the active classroom is about creating learning experiences differently so that students engage in exploration of the content and take on a good share of the responsibility

for their own learning it's about students reaching explicit targets in different ways which can result in increased student effort and a higher quality of work. Author Suzy Pepper Rollins details how to design, manage, and maintain an active classroom that balances autonomy and structure. She offers student-centered practical strategies on sorting, station teaching, and cooperative learning that will help teachers build on students' intellectual curiosity, self-efficacy, and sense of purpose. Using the strategies in this book, teachers can strategically let go in ways that enable students to reach their learning targets, achieve more, be motivated to work, learn to collaborate, and experience a real sense of accomplishment.

Active learning is now a form of learning that accompanies the knowledge evolution that challenges the learner to promote it but also encourages him to investigate and become emotionally involved in the task. The great key to obtaining this behavior successfully depends therefore on the student's involvement and ability to undertake so that active learning becomes emotional, entrepreneurial learning that generates new ideas and new forms of knowledge from memorization we move on to inquiry from questioning to constructive participation from hypothesis to problem solving from generalization to critical thinking. When we look at this book we see real examples, concrete and senses from the most important act of human nature: learning.

How can we structure class time efficiently? How can we explain and lecture effectively? How can we help students master content? How can we make learning more real and lasting? In this revised and greatly expanded 2nd edition of *Inspiring Active Learning*, educators Merrill Harmin and Melanie Toth provide answers to our fundamental teaching questions and show us how to transform our classrooms into communities of active, responsible learners. The authors present an array of research-based, teacher-tested strategies for managing our everyday responsibilities: from beginning a class to grading homework, from instructing large groups to promoting diligent seatwork, from motivating slackers to handling disruptors. These strategies focus on mutual respect, not bossiness; collaboration, not isolation; commitment to learning, not fear of failure; and the dignity of all, not praise or rewards for a few. Regardless of our level of experience or the grade or subject we teach, the active learning approach helps us perform routine teaching tasks more easily, discover a higher level of teaching success, and personal satisfaction. Establish a class climate of full participation and cooperation; prepare engaging lessons that keep students productively involved; encourage students to work energetically, willingly, and intelligently each day; inspire all students, even the most challenging, to strive for excellence. With its detailed classroom examples and more than 250 practical strategies, *Inspiring Active Learning* is a comprehensive reference for

the key idea behind active learning is that a machine learning algorithm can perform better with less training if it is allowed to choose the data from which it learns an active learner

may pose queries usually in the form of unlabeled data instances to be labeled by an oracle e.g. a human annotator that already understands the nature of the problem this sort of approach is well motivated in many modern machine learning and data mining applications where unlabeled data may be abundant or easy to come by but training labels are difficult time consuming or expensive to obtain this book is a general introduction to active learning it outlines several scenarios in which queries might be formulated and details many query selection algorithms which have been organized into four broad categories or query selection frameworks we also touch on some of the theoretical foundations of active learning and conclude with an overview of the strengths and weaknesses of these approaches in practice including a summary of ongoing work to address these open challenges and opportunities table of contents automating inquiry uncertainty sampling searching through the hypothesis space minimizing expected error and variance exploiting structure in data theory practical considerations
